CableOrganizer.com Reveals the Secret to Do-It-Yourself Traffic Control for Special Events

Organization Pros Share Tips, Tricks and Products That Will Ensure Your Special Event Doesn't Begin and End in Parking Hassles

FORT LAUDERDALE, FL, AUGUST 1, 2010 - Large parties, fundraisers and festivals take a lot of planning, and it doesn't end when you've lined up the food service, decorations and entertainment. Special events call for special [traffic control](#), whether you need to reconfigure an existing parking area, or transform a section of your property into a short-term parking lot.

Hiring valets, flaggers or parking attendants can greatly help to keep vehicles (and pedestrians) moving smoothly and in the right direction, but CableOrganizer.com Product Specialist Christina Hansen points out that sometimes a little structural help can come in handy, too. "Delineating the boundaries and directional flow of parking spaces, aisles and walkways keeps confusion and stress levels to a minimum," says Hansen. "It's one of the secrets to helping your guests both start and end the event on a high note."

CableOrganizer.com (<http://cableorganizer.com>) offers a few simple tips to ensure successful traffic and pedestrian flow at your special event:

*****Eagle Manufacturing Polyethylene Delineators:** Instead of leaving drivers to randomly steer and park their vehicles throughout a congested parking area, use these reflective, brightly-colored delineators to direct traffic flow into specific aisles. Orderly parking makes it easier for guests to remember where they left their cars, and safer for pedestrians to walk between the parking lot and event. Delineating poles are also useful for separating "front row" areas reserved for catering vans, deliveries, photographers and VIP vehicles from general parking areas. More info: <http://cableorganizer.com/eagle-manufacturing/delineators/>

*****Eagle Manufacturing Parking Stops:** Instead of allowing guests to overestimate how much space their vehicles need, maximize parking with individual parking spaces. Temporary parking spaces can be easily laid out with the help of portable polyurethane parking stops, which lay across the head of each spot like their permanent concrete counterparts, but can be picked up, moved and stored whenever necessary. If designating an entire lot's worth of parking spots isn't feasible, even a few parking stops can denote reserved spots for disabled individuals needing Accessible spaces, or VIPs and guests of honor. To make it extra clear who the spaces are reserved for, the parking blocks can be easily spray-paint stenciled with names or emblems. More info: <http://cableorganizer.com/eagle-manufacturing/parking-stops-speed-bumps.html>

*****Eagle Manufacturing Speed Bump Cord Protectors:** Speeding vehicles mean danger to pedestrians, so take control of parking lot speeds with portable, molded-polyurethane speed bumps. Just like portable parking stops, these temporary-to-permanent speed bumps can be installed wherever you need them, and either left in place or removed when the event is over. They can be anchored into the ground to avoid shifting upon vehicle contact, and also double as cable and hose protectors, thanks to built-in channels that run end to end. If you need to run power cords, hoses or air lines across the path of vehicle traffic, just cover them up with speed bump cord protectors, and anchor into place. Cars, trucks and golf carts can then drive safely over, without crushing or causing damage to the cables beneath. *****ArmorKraft Decorative Post Sleeves:** Bustling crowds of attendees can cause traffic of another kind: pedestrian. The best way to channel your guests in the right direction and keep them from trampling lawns and landscaping is create defined pedestrian walkways with the help of bollard posts and cording. Bollard posts are most often made of plain metal or treated lumber, but they don't need to drag down your event's décor. Simply cover existing bollards with these lightweight decorative post sleeves, which are styled to look like high-end cast iron, but are actually made of a chemical, weather and UV-resistant polymer. Slip the sleeves over your posts, connect them with the included chains, and your crowd control is instantly transformed from run-of-the-mill to sleekly sophisticated.
